SCREW-THREAD, MODIFIED, 60° STUB, DOUBLE

1. SCOPE

1.1 This standard covers the requirements for the double stub, 60° modified screw-thread series, classes and sizes for quick disconnect use.

1.2 Classification. Screw-threads covered by this standard shall be of the following series and classes, as specified.

<u>Double Stub Thread Series</u>			
Class 2A	Symbols DS-2A	.05 pitch	Table I
		0.1 pitch	Table II
		.1428 pitch	Table III
Class 2B	Symbols DS-2B	.05 pitch	Table IV
		0.1 pitch	Table V
		.1428 pitch	Table VI

1.3 Designation

Class 2A	X.XXXX (size) - 0.05P-0.1L-DS-2A
	X.XXXX (size) - 0.1P-0.2L-DS-2A
	X.XXXX (size) - .1428P-.2857L-DS-2A
Class 2B	X.XXXX (size) - 0.05P-0.1L-DS-2B
	X.XXXX (size) - 0.1P-0.2L-DS-2B
	X.XXXX (size) - .1428P-.2857L-DS-2B

2. REFERENCED DOCUMENTS

2.1 The issue of the following documents in effect on date of invitation for bids forms a part of this standard to the extent specified herein.

TABLE VII. Thread Data

	Major Diameter					Pitch Diameter		Minor Diameter			
	Tolerance Class	Dimension Dg				Width of Relief	Dimension Eg	Tolerance	Dimension Kg	Tolerance	Width of Relief
		Full	Tolerance	Truncated	Tolerance						
<u>Truncated Setting Plugs</u>											
Go -2A	Y	max Ds	plus	min Ds	minus		max Es	minus			Rs max
No Go -2A	X	max Ds	plus	min Es+2h/3	minus		min Es	plus			Rs max
Go -3A	Y	max Ds	plus	min Ds	minus		max Es + A	minus			Rs max
<u>Thread Ring Gages</u>											
Go -2A	Y					Rc max	max Es	minus	min Kn - A	minus	
No Go -2A	X					Ra max	min Es	plus	min Kn + .05h	plus	
Go -3A	Y					Rc max	max Es + A	minus	min Kn	minus	
<u>Thread Plug Gages</u>											
Go -2B	Y	min Dn	plus				min En	plus			Re max
No Go -2B	X	min Dn - .05h	minus				max En	minus			Rn max
Go-pre Plate	Y	min Dn + Ap	plus				min En + Ap	plus			Re max

Symbols used in this table are as follows:

h = Basic depth of thread
 Dg = Major dia of gage
 Es = Pitch dia of screw
 Ds = Major dia of screw
 Eg = Pitch dia of gage
 A = Allowance of external thread
 Ap = Allowance for plating
 Kg = Minor dia of thread ring gage

Dn = Major dia of nut
 Kn = Minor dia of nut
 En = Pitch dia of nut
 Rs = Max width of flat of screw minor dia
 Rn = Max width of flat of nut minor dia
 Ra = Max width of flat of screw major dia
 Rc = Min width of flat of screw major dia
 Re = Min width of flat of nut minor dia

TABLE VII. Thread Data (Continued)

Tolerances for Gage Class	"x" Tolerance			"y" Tolerance		
	0.05P - 0.1L	0.1P - 0.2L	.1428P - .2857L	0.05P - 0.1L	0.1P - 0.2L	.1428P - .2857L
Tolerance in lead	±.0003	±.0003	±.0004	±.0003	±.0003	±.0004
Tolerance on half angle of thread	±15'	±10'	±05'	±20'	±10'	±05'
Tolerance on major or minor dia	.0005	.0006	.0007	.0005	.0006	.0007
Tolerance on pitch dia to and including 1 1/2 inch dia	.0003	.0003	.0004	From .0002 To .0005	.0002 .0006	.0002 .0007
Tolerance on pitch dia above 1 1/2 inch dia	.0004	.0004	.0005	From .0002 To .0007	.0002 .0008	.0002 .0009

FORMULAS FOR CALCULATING THREAD DATA

External Thread (screw)

Major Dia (Max) = Basic thread size - Allowance
 (Min) = Max major dia - Tolerance
 Pitch Dia (Max) = Max major dia - h
 (Min) = Max pitch dia - Tolerance
 Minor Dia (Max) = Max major dia - 2h - (0.02P x 2)
 (Min) = Max minor dia - Tolerance

Internal Thread (nut)

Minor Dia (Min) = Basic thread size - 1.7648h
 (Max) = Min minor dia + Tolerance
 Pitch Dia (Min) = Basic thread size - h
 (Max) = Min pitch dia + Tolerance
 Major Dia (Min) = Basic thread size + (0.02P x 2)
 (Max) = Min major dia + Tolerance

 N.I.L.-STD-1373
 8 April 1971

MIL-STD-1373
8 April 1971

3. DEFINITIONS

3.1 Definition and application. The double stub 60° modified thread covered by this standard is in agreement with Handbook H28, insofar as nominal size is concerned. This thread is recommended for electrical connectors and other devices requiring fast coupling action and strong, shallow thread.

4. GENERAL REQUIREMENTS

4.1 Not applicable.

5. DETAILED REQUIREMENTS

5.1 Form of thread. The double stub 60° modified screw-thread form, as shown in figures 1 and 2, shall be used for all screw-threads covered by this standard.

5.2 Basic thread data. The basic thread data for the double stub 60° modified screw-thread is given in tables VIII, IX and X.

5.3 Thread series. Series of threads are classified and distinguished from each other by (1) the number of threads per inch (pitch) applied to specific diameters and by (2) the relationship of lead to pitch, i.e., lead equal to, double, or triple the pitch.

5.4 Thread classes. Classes of threads are distinguished from each other by the amount of tolerance and allowance specified. Threads specified herein are for the Class 2 double stub 60° modified screw-thread. Figure 2 shows the thread engagement for this class. Class 2A applies to external threads. Class 2B applies to internal threads.

5.5 Thread start. The thread start shall be full width. Full thread depth shall be attained by an increase from root to crest through a maximum arc of 120° (see figure 3).

5.6 Surface roughness. When the requirements of design or application make control of the surface roughness of screw-threads absolutely necessary, the allowable roughness shall be specified in microinches RMS in accordance with MIL-STD-10.

5.7 Gages. All gages shall conform to tables XII, XIII and XIV and the gage tolerances shall conform to applicable requirements of the National Bureau of Standards Handbook H28. The gage design shall be in accordance with Commercial Standard CS8-51 for gage blanks.

5.7.1 Gages for plated threads. Unless otherwise specified, maximum gaging limits of Class 2A products which are plated may be increased by the amount of the product allowance.

5.7.2 Gage wear. Gages shall not be permitted to wear beyond such a point that the product being gaged will be outside the limits specified. Gages shall be reset or replaced when these limits are exceeded.

5.7.3 "No Go" gaging. No go ring or plug gages may engage the product not more than one half turn when the gage shall be restricted to encounter a snug fit for the remainder of the full thread of the product.

5.8 Workmanship. Workmanship shall be consistent with the tolerances specified therein. Threads shall have a smooth finish, free from flaws, abrupt terminations, and other defects which would make them unsuitable for the purpose intended. When the surface roughness is specified, the smoothness of the thread shall be within the limit or limits specified.

MIL-STD-1373
8 April 1971

Note: Formulas for these values are given in table XI.

TABLE XI.
FORMULAS FOR CALCULATING WIDTH OF FLATS

External Thread (screw)		
F _C (Major Dia)	BASIC	$= P/2 - [(Max \text{ Major D. Screw}) - (Max \text{ P. D. screw})] \tan 30^\circ$
	MAX	$= P/2 - [(Min \text{ Major D. Screw}) - (Max \text{ P. D. screw})] \tan 30^\circ$
	MIN	$= P/2 - [(Max \text{ Major D. screw}) - (Min \text{ P. D. screw})] \tan 30^\circ$
F _R (Minor Dia)	BASIC	$= P/2 - [(Max \text{ P. D. screw}) - (Max \text{ Minor D. screw})] \tan 30^\circ$
	MAX	$= P/2 - [(Min \text{ P. D. screw}) - (Max \text{ Minor D. screw})] \tan 30^\circ$
	MIN	$= P/2 - [(Max \text{ P. D. screw}) - (Min \text{ Minor D. screw})] \tan 30^\circ$
Internal Thread (nut)		
F _C (Minor Dia)	BASIC	$= P/2 - [(Min \text{ P. D. nut}) - (Min \text{ Minor D. nut})] \tan 30^\circ$
	MAX	$= P/2 - [(Min \text{ P. D. nut}) - (Max \text{ Minor D. nut})] \tan 30^\circ$
	MIN	$= P/2 - [(Max \text{ P. D. nut}) - (Min \text{ Minor D. nut})] \tan 30^\circ$
F _R (Major Dia)	BASIC	$= P/2 - [(Min \text{ Major D. nut}) - (Min \text{ P. D. nut})] \tan 30^\circ$
	MAX	$= P/2 - [(Min \text{ Major D. nut}) - (Max \text{ P. D. nut})] \tan 30^\circ$
	MIN	$= P/2 - [(Max \text{ Major D. nut}) - (Min \text{ P. D. nut})] \tan 30^\circ$
